Inorganic pigment mixt. containing filler - and as dispersant,
phosphoro-polysiloxane, to increase dispersibility in plastics

Patent Assignee: BAYER AG (FARB)

Inventor: MAASS G; MORETTO H H; RITTER W; STEINBERGE H; TURBAN K; WODITSCH P

Number of Countries: 001 Number of Patents: 002

Abstract (Basic): DE 3015766 A

Inorganic pigments (IA) and fillers (IB) with improved dispersibility in plastics have a coating of phosphoropolysiloxane (II), pref. in an amt. of 0.1-2 (0.2-1)% w.r.t. the wt. of (I). S (II) can be linear, branched or cyclic and have the following units, in any sequence: (R'O_{1/2}) (R₂SiO) (O₂P(OH)) (RSiO_{3/2}) (SiO₂) (R₃SiO_{1/2}) (in which R and R' independently are H, alkyl, cycloalkyl, aryl and/or alkenyl gps.). Pref. (II) comprise (HO_{1/2})₂(R₂SiO)_x(O₂P(OH))_y (in which x is over 6 and y is over 3. x+y = 10-1400, pref. 90-800). (II) have a P content of 0.1-15 (1.5-4.5)%. (II), opt. in diluted or emulsified form, can be applied to (I) before or during micronisation of the wet or dried filter cake.

(I) are specified for use in plastics and for producing (I) batches.
